PROJECTS

[Developed APIs with Node.js and Express.js for Shoppyglobe ↗](#)

Feb 2025 - Mar 2025

- Extended the Shoppyglobe e-commerce platform by developing a backend using Node.js and Express.js to handle data storage, user authentication, and API endpoints.
- Utilized MongoDB for efficient data storage and retrieval, ensuring smooth interaction between the front end and back end and used RESTful API endpoints for key functionalities like product listing, user registration, authentication, and shopping cart management.
- Token-based authentication using JSON Web Tokens (JWT) was implemented to enhance security and user session management. My focus was on building a scalable, secure, and high-performance backend that integrates seamlessly with the front end.

[Shoppyglobe E-commerce Application ↗](#)

Jan 2025 - Feb 2025

- Developed Shoppyglobe, a fully operational e-commerce platform, allowing users to explore products, manage a shopping cart, and complete transactions. A responsive, user-friendly interface using React and React Router, ensuring smooth navigation across pages.
- Redux was used for efficient cart and state management, enabling seamless updates during the shopping process. An API is integrated to dynamically fetch product data, providing real-time updates and improving performance.
- The app was optimized for performance and responsiveness across devices, focusing on delivering a fast and engaging shopping experience.
